

Grounding box model one

New original design and technology solution developed by Lector strumenti audio on our Groundig box model one.

The design is based on our big anamorph low noise capacitor built in our lab with large copper plate and round disk made by copper fitted over pillar on top plate.

Grounding capacitor is isolated by alluminum box and closed by silicium pills for to reduce humidity.

Grounding box model one supply very low noise ground (GND-Earth) terminal for better and optimal interface audio equipment.

The protucts come supplied with 5 terminal ground connectors with internal passive electrical circuits for to reduce the ground loop.

Audio systems get a great improvement with ideal grounding terminal connection by model one : better resolution, lower residual noise, clean all spectrum audio.

Groundig box model one use real wood case as 2 cm tickness.

OPTIONAL & CONVENIENCE

- Litz cable for connection to audio system by RCA connector (2 mt)
- Litz cable for connection to audio ground by clamp (2 mt)
- optional cone tip like spike
- optional cable with various electric terminal on request
- max dimension : 30 (L) x 35 (D) x 16 (H) cm
