

## ZOE concept studio

**Stereo line preamplifier with separate power supply**

*Zoe concept studio, include new design approach on high selected components*

New volume control based on ladder circuit with constant impedance.

Separate power supply unit for better signal to noise ratio

Polypropylene capacitor on power supply circuit

Special Film & Foil capacitors on signal path, just one for output

No input capacitors on signal path

Ultra low noise tube circuits with ECC-802S

Cathode optical bias control

Shunt parallel power supply for HT voltage section reducing the sound power supply influence

Lateral sides panel available as cherry wood or solid black plexi
