

Our Masterpiece

Speaker "Radialstrahler" mbl 101E MK II

Evenly distributed natural sound radiation,
free choice of listening position

Absolutely relaxed musical pleasure even
over prolonged listening periods

The sound is adaptable to room acoustic
and different electronics

Ideal for rooms of up to 100 m²

When musicians have to play in a variety of halls, and different audiences react differently to the same music, you need to have a great deal of flexibility at your finger tips if you want to recreate magical moments. You must be at ease in each kind of situation and know how to make the best of it.

We believe that these are exactly the kind of qualities a loudspeaker needs to possess. It must fit in easily with your surroundings and not strive to dominate them. The principle of the "Radialstrahler" is a perfect

complement to our credo. The "Radialstrahler" ensures equitable distribution of energy throughout the whole room and thus works in perfect harmony with its environment.

But it's in the lower middle tone range that the 101E really shows its special qualities. This is the range in which the loudspeaker connection to the air in the room is as problematic as it is decisive for the quality of the sound because it is the point that determines the naturalness and flexibility of the sound.

And as true art is created by attention to details, we have given the 101E two different loudspeaker cables which enable two separate entry points to the chassis. At the same time a variety of different materials allows you to choose further options. All this means that the 101E achieves an incredible level of flexibility. Our masterpiece brings music together with your home environment in perfect harmony.
