

## *mbl 126 - Enter the fascinating world of MBL sound*

"An MBL Radialstrahler is something I'll never be able to afford."

This is something we have taken to heart and now we have come up with an answer. With the new mbl 126 we have developed a truly small speaker based on the omni directional radiating principle – and it is a genuine MBL. A speaker that lives from its unbelievable musicality made possible by our exclusive technology.

The new entry level model follows the energy-preserving construction basis of the large models. The woofer, in a push-push arrangement counters the forces

and reduces the cabinet vibrations. As a result, the cabinet made of high-quality materials and valuably crafted by hand remains entirely solid. You are able to hear even the finest nuance, no musical detail is lost.

The new mbl 126 also has two new radial drivers for the midrange and upper frequency range. Thus it has all the genes needed to bring music to life in a tangibly true, three-dimensional rendition.

The drivers, enhanced through work of meticulous precision, now provide an even finer musical experience and render the original with unrivalled perfection.

Thanks to the unparalleled speed of its radials segments, the absolute dynamic of the mbl 126 can reproduce music of any kind entirely in its natural sound.

You can create high-quality two-channel and surround systems using the mbl 126. Speaker stands and a special center-speaker version of the mbl 126 that harmonise both visually and technically provide the perfect setting.

The mbl 126 is the smallest MBL Radialstrahler. Experience just how grandiose an entry level model can be – when it is a question of first entering the world of MBL.

Woofer	push-push 2 x 5 inch
Midrange	Radial MT50, CFK (MBL)
Tweeter	Radial HT37, CFK (MBL)
Acoustic Center	42.1 inch
Cabinet Volume	11 liter
Weight incl. speaker stand	52.9 lbs
Dimensions (WxDxH)	10 x 13.5 x 20.4 inch
Height incl. speaker stand	44 inch (incl. cover)
